1. DISASSEMBLY

● CHECKING FOR POWER AMP ASSY

1. Remove the bonnet.

2. Remove the VOLUME knob and unscrew nut the ① (Fig. 1).

3. Unscrew the fastening screws ② of the front panel (2 upper and 5 lower screws.).

4. Unscrew the fastening screws ③ (1 screw) and ④ (2 screws) of the RADIATOR.

5. Lift up the RADIATOR (in the direction of the arrow ⑤) approximately 5mm, and remove it from the chassis hook.

6. Remove the lower hooks ⑥ of the front panel (2 places).

7. Slowly remove the front panel together with the RADIATOR. When doing this, be careful so that the flat cable ⑦ form CN 1 does not get caught.

8. When the VOLUME knob shaft ⑨ has been distanced from the front panel, lower the fins of the RADIATOR as shown in Fig. 2 and raise the shaft.

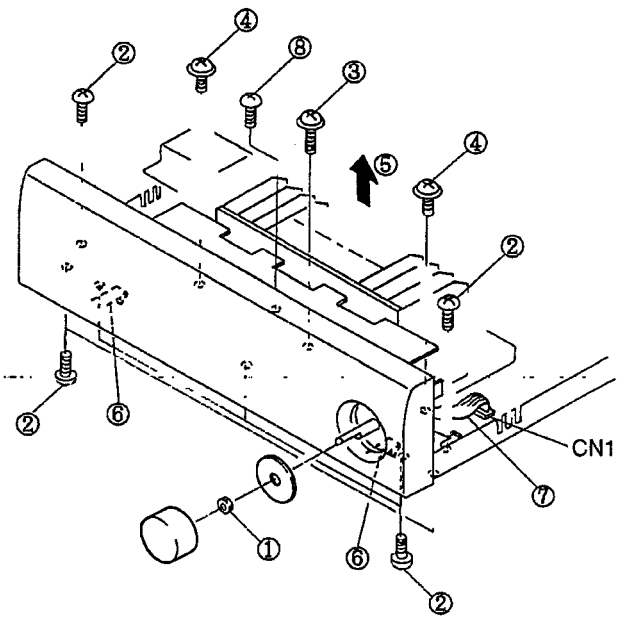

Fig. 1

● HOW TO REMOVE THE POWER AMP ASSY

1. Remove the fastening screw ③ of the RADIATOR (1 screw) and ④ (2 screws) and the center fastening screw ⑧ (1 screw) of the POWER AMP ASSY (Fig. 1).

2. Lift up the RADIATOR (in the direction of the arrow ⑤) approximately 5mm, and remove it from the chassis hook.

3. Pull the RADIATOR backward and remove the POWER AMP ASSY and RADIATOR together.

Note : The CONTROL ASSY of the front panel and the POWER AMP ASSY are connected only with connectors, and they can the refore be easily removed by carrying out the above operations.

Indicator goes out when not in use.
NOTE:
- *When no connections are made to the TAPE 2 MONITOR terminals, or when they are not in use, be sure to set this switch to the OFF position. (No sound will be heard if it is set to the ON position.)*
- *When the TAPE 2 MONITOR indicator is on and the input selector switch is not set to TAPE 1/DAT, the signals which are input through TAPE 2 MONITOR are then output at TAPE 1/DAT REC OUT.*

⑤ DIRECT switch/indicator
Use this switch when you do not wish to pass the output from input terminal equipment through the various frequency adjusting circuits (BASS, TREBLE, BALANCE, LOUDNESS.)
ON:
The indicator lights: The signals input through the input terminals are reproduced without passing through the various frequency adjusting circuits. This results in flat, pure sound which is a more faithful reproduction of the input source.
OFF:
The indicator goes out: The signal passes through the various frequency adjusting circuits.

⑥ MUTING button/indicator (Only U.K. model of A-203)
Use to temporarily cut sound volume.
ON: (Red illumination)
The indicator lights. The sound volume will be reduced −20dB.
OFF:
The indicator goes off. The sound will return to its previous volume.

⑥ LOUDNESS switch/indicator (Except U.K. model of A-203)
Use when listening at low volume levels.
ON:
The indicator lights: Boosts low and high frequencies to give added punch to playback even at low volume levels.
OFF:
The indicator goes off: Should normally be left in this position.
NOTE:
This control does not operate when the DIRECT switch is in the ON position.

⑦ BALANCE control
Should normally be left in the center position. Adjust the balance if the sound is louder from one of the speakers. If the right side is louder, turn toward the L (left) position and if the left side is louder, turn toward the R (right) position.
NOTE:
This control does not operate when the DIRECT switch is in the ON position.

⑧ TREBLE tone control
Use to adjust the high-frequency tone. The center position is the flat (normal) position. When turned to the right, high-frequency tone is emphasized; when turned to the left, high-frequency tone is de-emphasized.
NOTE:
This control does not operate when the DIRECT switch is in the ON position.

⑨ BASS tone control
Use to adjust the low-frequency tone. The center position is the flat (normal) position. When turned to the right, low-frequency tone is emphasized; when turned to the left, low-frequency tone is de-emphasized.
NOTE:
This control does not operate when the DIRECT switch is in the ON position.

⑩ SPEAKERS B selector switch (A-203 only)
Use this switch to listen to the speaker system connected to the SPEAKERS B terminals.
ON (■):
Depressed position: Sound is heard from the speaker system.
OFF (■):
Released position: No sound is heard from the speaker system.
Set to this position when listening with headphones

⑪ SPEAKERS A selector switch (A-203 only)
Use this switch to listen to the speaker system connected to the SPEAKERS A terminals.
ON (■):
Depressed position: Sound is heard from the speaker system.
OFF (■):
Released position: No sound is heard from the speaker system.
Set to this position when listening with headphones.

⑫ PHONES jack
When using headphones, insert the plug into this jack.
With model A-103 the output to the speakers is cut automatically when connecting headphones.
